Chapter 13
CHEMICAL REACTIONS

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Chemical Reactions and Equations

During a chemical reaction, one or more new compounds are formed as a result of the rearrangement of atoms.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

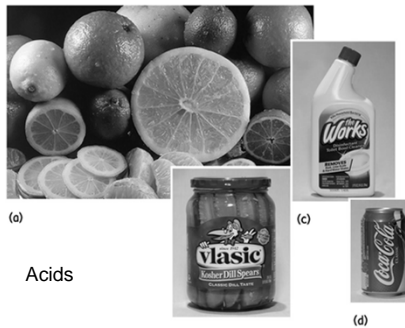

Chemical Reactions and Equations

Law of Mass Conservation: No atoms are gained or lost during any reaction.

The number of times atoms appear before the arrow must be equal to the number of times they appear after the arrow.

Acid–Base Reactions

Acid

- A chemical that donates a hydrogen ion, H^+

Base

- A chemical that accepts a hydrogen ion, H^+

(acid) (base)

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Salts

Salt: An ionic compound formed from the reaction of an acid and a base.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Salts

Salt: An ionic compound formed from the reaction of an acid and a base.

Table 13.1 Acid-Base Reactions and Salts Formed

Acid		Base		Salt		Water
HCN	+	NaOH	→	NaCN	+	H ₂ O
HNO ₃	+	KOH	→	KNO ₃	+	H ₂ O
2 HCl	+	Ca(OH) ₂	→	CaCl ₂	+	2 H ₂ O
HF	+	NaOH	→	NaF	+	H ₂ O

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Salts

Salt: An ionic compound formed from the reaction of an acid and a base.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Solutions: Acidic, Basic, or Neutral

Water can behave as an acid or a base.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Solutions: Acidic, Basic, or Neutral

Water can behave as an acid or a base.

In pure water, for every one hydronium ion, H₃O⁺, formed, there is a hydroxide ion, OH⁻, formed.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Solutions: Acidic, Basic, or Neutral

So, in pure water, [H₃O⁺] = [OH⁻] = 0.0000001 M = 10⁻⁷ M.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

Solutions: Acidic, Basic, or Neutral

Add hydronium ions, H₃O⁺, and the solution is "acidic."

Add hydroxide ions, OH⁻, and the solution is "basic."

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley.

The pH Scale

pH is a measure of the concentration of hydronium ions, H_3O^+ .

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

For pure water:

$$\text{pH} = -\log (10^{-7})$$

$$\text{pH} = -(-7)$$

$$\text{pH} = 7$$

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

The pH Scale

The “log” of a number is simply the power to which ten is raised. The log of 10^3 , for example, is 3.

Quiz Time

What is the log of 10^2 ?

Log $10^2 = 2$

(the power to which 10 is raised)

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

The pH Scale

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

For acidic water $\text{pH} < 7$, for example:

$$\text{pH} = -\log (10^{-5})$$

$$\text{pH} = -(-5)$$

$$\text{pH} = 5$$

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

The pH Scale

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

For basic water $\text{pH} > 7$, for example:

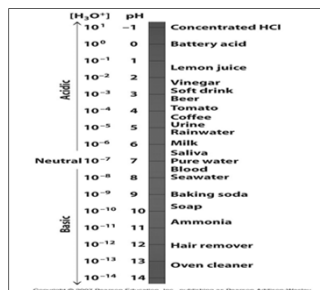

$$\text{pH} = -\log (10^{-9})$$

$$\text{pH} = -(-9)$$

$$\text{pH} = 9$$

Oxidation-Reduction Reactions

Acid-Base reactions: transfer of proton

Oxidation-Reduction reactions: transfer of electron

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Oxidation-Reduction Reactions

Oxidation: The loss of an electron

Reduction: The gain of an electron

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Oxidation-Reduction Reactions

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Oxidation-Reduction Reactions

Little tendency to lose or gain electrons

More likely to behave as oxidizing agent (be reduced)

More likely to behave as reducing agent (be oxidized)

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Oxidation-Reduction Reactions

Oxidation
(Ionic state becomes more positive)

Loses electrons

Gains oxygen

Loses hydrogen

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reduction
(Ionic state becomes more negative)

Gains electrons

Loses oxygen

Gains hydrogen

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Corrosion and Combustion

Corrosion: The process whereby a metal deteriorates through oxidation-reduction reactions.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Corrosion and Combustion

Corrosion can be prevented by coating the metal with zinc, which oxidizes first.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Corrosion and Combustion

Combustion: An oxidation-reduction reaction between a nonmetallic material, such as wood, and oxygen.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reaction Rates

Reaction rate: The speed with which products form from the reactants.

Affected by

- Concentration
- Temperature
- Catalyst

Premise:

Reactant molecules have to make physical contact with each other in order to transform into products.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reaction Rates

Affected by

- Concentration

The more concentrated a sample of nitrogen and oxygen, the greater the likelihood that N_2 and O_2 molecules will collide and form nitrogen monoxide.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reaction Rates

Affected by

- Temperature

Slow-moving molecules may collide without enough force to break the bonds. In this case, they cannot react to form product molecules.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reaction Rates

Affected by

- Catalysts

Reactant molecules must gain a minimum amount of energy, called the activation energy, E_{act} in order to transform into product molecules.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison-Wesley

Reaction Rates

Affected by

- Catalysts

A catalyst has the effect of lowering the activation energy, which allows for the reaction to proceed at a quicker rate.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Exo- and Endothermic Reactions

Exothermic reaction: A chemical reaction that results in the net production of energy.

Endothermic reaction: A chemical reaction in which there is a net consumption of energy.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Exo- and Endothermic Reactions

Table 13.2 Selected Bond Energies

Bond	Bond Energy (kJ/mole)	Bond	Bond Energy (kJ/mole)
H—H	436	O—O	138
H—C	414	Cl—Cl	243
H—N	389	N—N	159
H—O	464	N=O	631
H—F	569	O=O	498
H—Cl	431	O=C	803
H—S	339	N≡N	946
C—C	347	C≡C	837

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Use the bond energies below to determine whether the following reaction is exothermic or endothermic:

H-H (bond energy: 436 kJ/mol)
Cl-Cl (bond energy: 243 kJ/mol)
H-Cl (bond energy: 431 kJ/mol)

- A. Exothermic with more than 50 kJ of energy released.
 B. Endothermic with more than 50 kJ of energy absorbed.
 C. Endothermic with less than 50 kJ of energy absorbed.
 D. Exothermic with less than 50 kJ of energy released.

✓ (Default)

Entropy and Chemical Reactions

It is the natural tendency of energy to disperse from where it is concentrated to where it is dilute.

Examples

- A hot pan radiates heat
- Gasoline combusts into smaller molecules
- Marbles bouncing on the floor come to a stop

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Entropy and Chemical Reactions

It is the natural tendency of energy to disperse from where it is concentrated to where it is dilute.

Entropy: The term used to describe the degree to which energy has become dispersed.

Reactions that result in an increase in entropy (energy dispersal) tend to occur on their own.

Copyright © 2007 Pearson Education, Inc., publishing as Pearson Addison Wesley

Entropy and Chemical Reactions

- Exothermic reactions tend to be self-sustaining because they lead to large increases in entropy.

Example: A campfire

- Endothermic reactions tend to require the continual input of energy.

Example: Photosynthesis
